

主旨: Population policy public engagement

To whom it may concern,

Please note my below opinion

1. Screening of one way permit holders entering in HK The HK government should imposed a merit based system to assess those whom are eligible to enter into HK.

The holders should be guaranteed by a permanent HK resident to avoid them from abusing the social system upon arrival in HK.

A proper screening of their assets in China should be required.

2. Restrict the number of mainland students for tertiary education Priority should be given to local HK students. Internationalization of universities should be promoted instead of only focusing on mainland students.

With the large influx of mainland students, local universities is turning into mainland university, which is not good for the long term

3. Improvement for policies backing up local Hong Kong families to have children More resources should be given to improve the way middle class with working parents can have children. Possible policies would be tax reduction, daycare services for young children

4. Protect local workers by minimizing foreign workers The welfare of HK local workers should be protected
